* Not applicable to all resistance values. Please check with us regarding the PPM of specific resistance value(s).

■ SINGLE SURGE PERFORMANCE

■ SURGE POWER DERATING CURVE

Notes:

• SINGLE SURGE PERFORMANCE graph is good for NON REPETITIVE applications operating in an ambient temperature of 70°C or less. For temperatures above 70°C, the graph power must be derated further linearly down to zero at 125°C.

• To determine applicable surge power in continuous-surge applications:

1. Identify allowable duration and peak power P_{surge} of single surge;
2. Determine ratio of surge duration/surge OFF time in application;
3. Calculate P_{applicable} backwardly according to Y-axis of SURGE POWER DERATING CURVE.
